(54) AUCTION SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To discriminate article types by colors without reading article names by displaying article name display columns of an auction display panel in colors set by article types.

SOLUTION: Display colors are set by article types by a setting part 1 of an auction place device (a) and are stored in a memory part 2. A discrimination part 4 compares an auction article name from an auction information input part 3 with data read out from the memory part to discriminate a coinciding article type. A signal processing part 5 performs signal processing for display based on signals from the auction information input part and the discrimination part, and present auction information is projected on a screen 7 by a projector projection part 6, and next auction information is inputted to a PDP/CRT display part 8 connected to the screen and is displayed as a picture. A bidding entry plan is inputted from an input part 11 of a bidding entry terminal machine (b) and is stored in a memory part 12, and next auction information is stored in a next auction information storage part 9 and is sent to the bidder terminal machine by next auction information display and is compared with data from the memory part 12 by a discrimination part 13, and presentation of a bidding predeterminate article is displayed on a display part 14.
